Work is progressing on the Limondale Battery Energy Storage System

RWE Renewables Australia is continuing construction of Australia's first eight-hour Battery Energy Storage System (BESS) at the existing Limondale Solar Farm site.

All battery containers are now on site, and kilometres of underground cables in conduit have been pulled into location and are awaiting final connections. The first of our 36 transformers have been delivered – along with electrical switchgear – and the site is looking more and more complete with each day.

In our next update we should see a shiny new switch room installed, along with the beginning of the perimeter fencing.
