## Australia's first eight-hour Battery Energy Storage System

RWE Renewables Australia has started construction of a Battery Energy Storage System (BESS) at the existing Limondale Solar Farm site.

The BESS will be Australia's first eight-hour battery and has a planned capacity of 50+ megawatts and 400+ megawatt hours. Construction began in late 2024 and is expected to be completed in December 2025, with a workforce of up to 40 required during peak periods.

The Limondale BESS will support the energy transition by storing excess renewable energy and feeding it into the NSW grid when it is needed most.
