Limondale Battery Energy Storage System on track as key infrastructure takes shape

More transformers landed on site in May and our cabling and connections works progressed at pace. Construction of a perimeter fence is underway, to provide additional site security and allow us to easily delineate the BESS from the solar farm once the project is complete.

The switchroom is now in place, and there is a lot of work happening in this space to ensure safety and compliance matters are appropriately adhered to.

Stay tuned for the June update, which should see the completion of all fencing and cabling!
