Limondale Battery Energy Storage System

November update

Following steady progress on commissioning earlier this year, RWE Renewables Australia has now achieved a major milestone with the successful registration of the Limondale Battery Energy Storage System (BESS).

This marks the transition from construction to final testing, with full commissioning expected by the end of the year. RWE is proud to deliver this pioneering system and thanks Tesla, Beon, Lumea, and TransGrid and all others involved in reaching this important milestone.
