

Limondale Battery Energy Storage System (BESS)

September update

The Limondale BESS has reached a major milestone, with successful staged energisation. This milestone marks the transition from construction and installation to full system commissioning, with grid integration and performance testing continuing. The BESS has a planned capacity of more than 50 megawatts (MW) and 400 megawatt hours (MWh), making it the longest-duration grid-scale battery operating in the country and Australia's first eight-hour BESS.
